

Lappeenranta University of Technology

LUT School of Energy Systems

Master's Programme in Electrical Engineering

Ellina Shchurovskaya

Nowadays studying abroad is gaining increasing popularity. There are a lot of opportunities to get a bachelor's degree, a master's degree or even a Doctoral degree all over the world. As I had no chance to start my higher education in different country, I have strongly decided to apply for international programme during my master's degree. There are multiple international programs for students who are willing to study abroad at my home university. As Lappeenranta University of Technology provides scholarships and high-quality teaching, I have chosen it to be my university.

I really enjoy my way of life in Finland now. I like the process of learning as LUT provides great study facilities (e.g. modern libraries, laboratory support, an Internet access) that is why it is easy for me to be a dedicated student. However, I also like to have an active social life. During the whole education process, I had a chance to meet a lot of new friends from all over the world. We stay in contact and take an active part in many entertainment events provided by our university. Many events are devoted to Finnish culture and tradition. I really like that kind of programs because it is a great opportunity to feel the spirit of the country and to get acquainted with its customs.

It is worth to mention that LUT follows all modern trends in the world of technologies: the solutions of the scientific problems are pioneering, and the teaching techniques are progressive. All the professors with whom I have met are really involved in the sphere of electrical engineering and are open for discussions or even further cooperation. Also, the environmental problems of now are given special attention in the study process.

As modern scientific and enterprise projects require one key ingredient - international cooperation, I see the double degree program as a great opportunity to share knowledge with professionals from all around the world. Different methods of problem-solving may yield different outputs but combining their best parts and refining the result is what makes a successful project successful. This is the motivation behind my will to study at LUT - I would like to take an active part in the process of making the world a better place.

To sum it up I want to say that I am really appreciate the great opportunity to study at Lappeenranta University of Technology. And I also would like to express my deep gratitude to The Association of Electrical Engineers in Finland for their support.
